

CUNY AI LAB

Configuring skills and tools

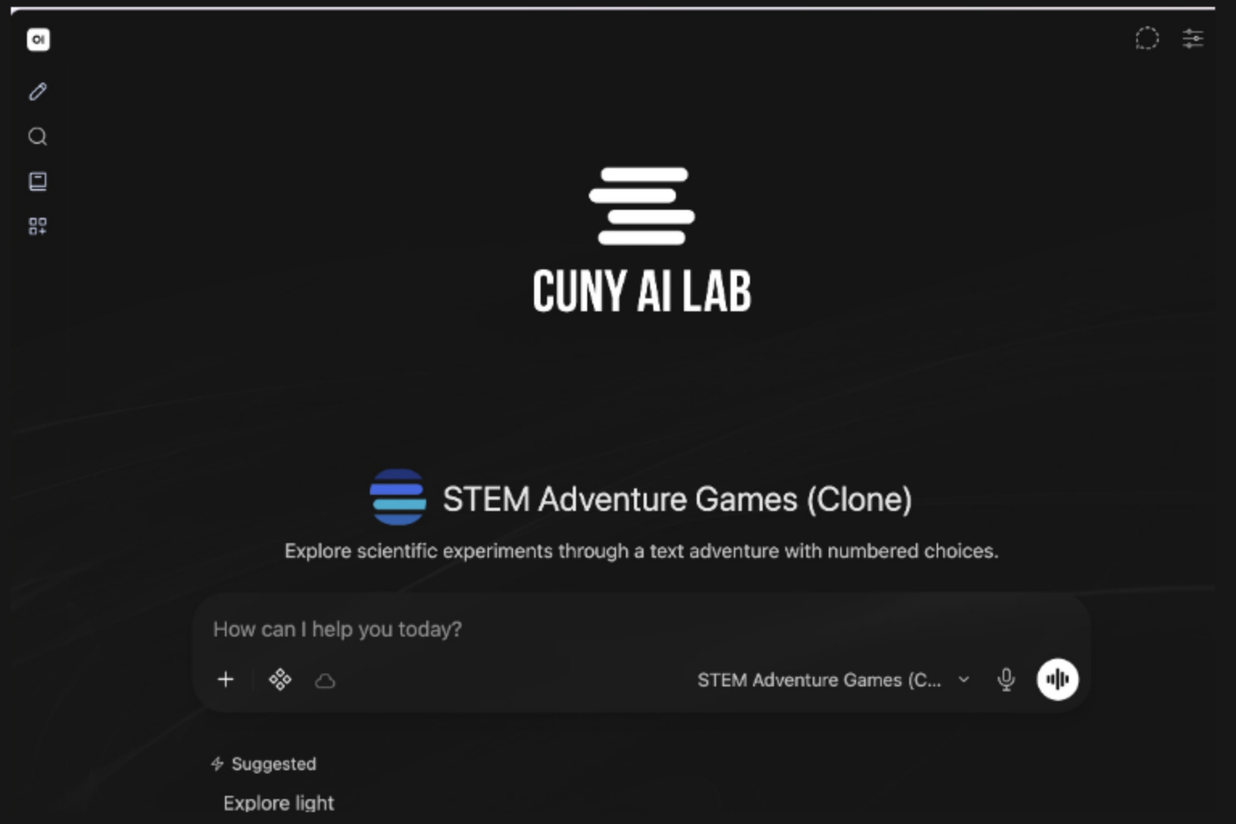

New Media Lab · Room 7388.01
CUNY Graduate Center

Thursday, October 15, 2026 · 2:30–4:00 p.m. Eastern

https://cuny-ai-lab.github.io/sandbox-series/skills

Continue Your Model

Choose your saved model below message box
Read its system prompt for setting, goals, and rules
Clone route · Earlier instructions and sources

Skill Procedures

A skill is a plain-text procedure for a repeatable task

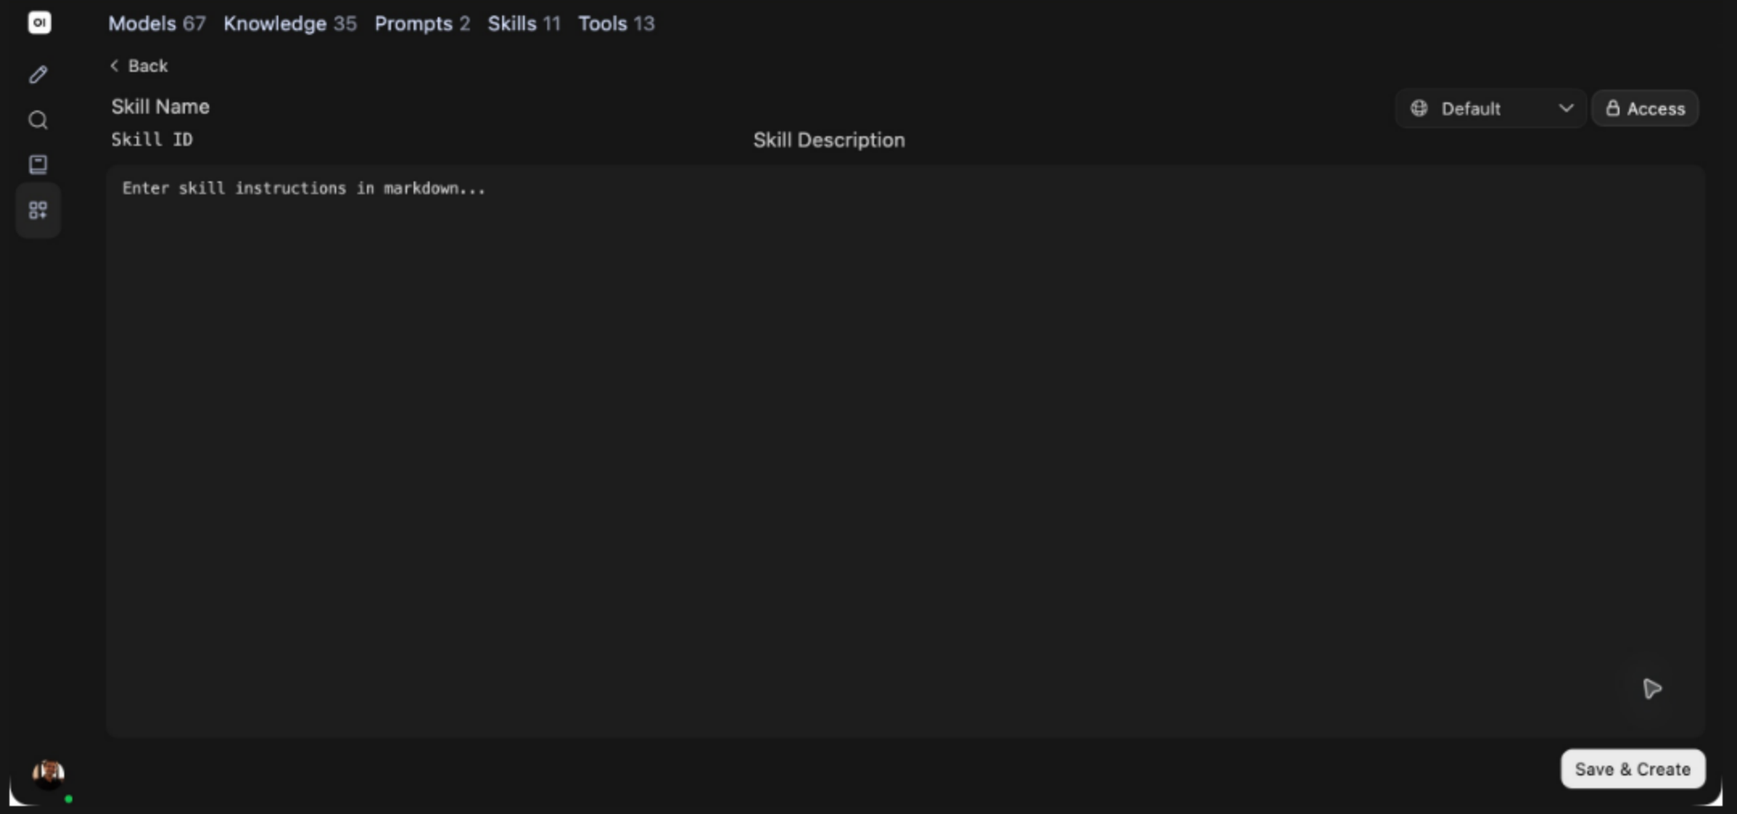

Trigger	When a procedure applies
Procedure	Steps, conditions, and points that require a question
Output	Required response shape

Add Your Skill

Open **Workspace → Skills → Create**

Enter Name, ID, Description, and complete instructions

Review **Access**, then **Save & Create**

Test Your Skill

Select your copy through **Integrations → Skills**

Ask whether an observed record satisfies prompt goals
Withhold required evidence and check for a question
Ask to stop with unfinished goals and check its response

Which task in your teaching or research needs a repeatable procedure?

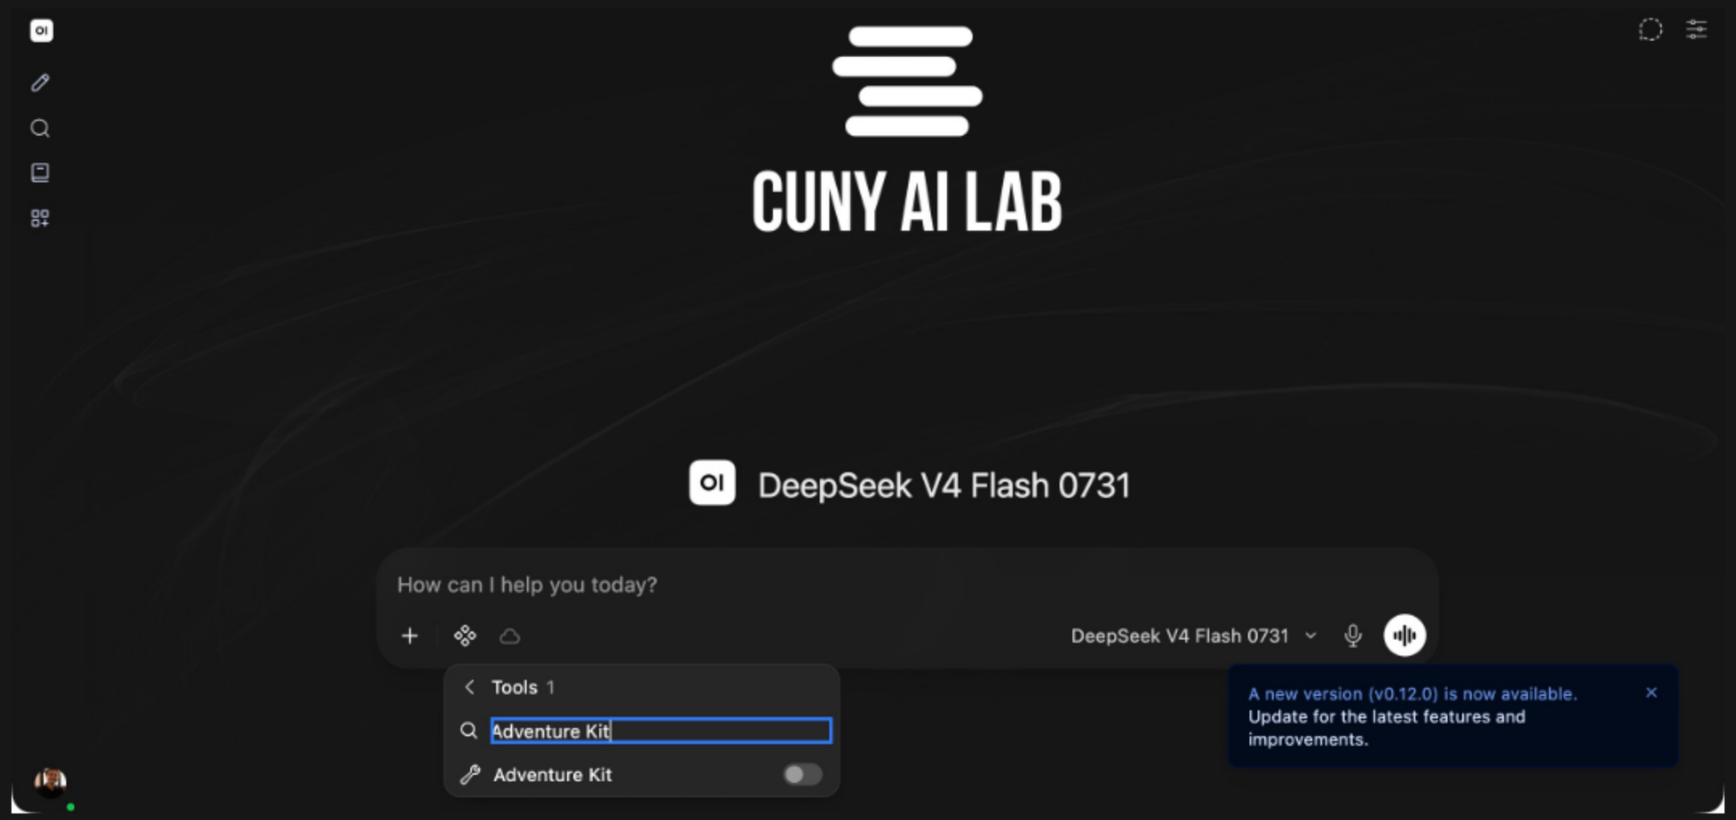

Tool Actions

A tool is a function a model calls to execute an operation

Input	Data for an operation
Execution	Code that applies specified rules
Result	Output a model can inspect or discuss

Add Adventure Kit

Open **Integrations → Tools**
Search **Adventure Kit** and select its toggle

Prepare Your Adventure

Setting, goals, and rules come from your system prompt

Ask your model to show how those instructions map into scene, choices, and end conditions

Resolve absent or contradictory instructions
Review proposed input, then run **Adventure Kit**

Copy preparation and run requests

Test Your Tool

Compare rendered scene and choices with your prompt

Try a choice before and after its prerequisite
Inspect Undo and Stop
Copy actual play record into chat

Which step in your teaching or research needs an executable operation?

Choose Your Task

Revise One Item

Copy complete tool code or skill instructions

Describe an observed problem and one change

Create Your Own

Choose your own tool or skill

Specify purpose, required input, and expected result

Tool copy route · Skill instructions

Work With Support

Open **CAIL Workspace Support**

Paste original content or your new task, system prompt, and required sources

Request complete content, an explanation, and one test · Copy request

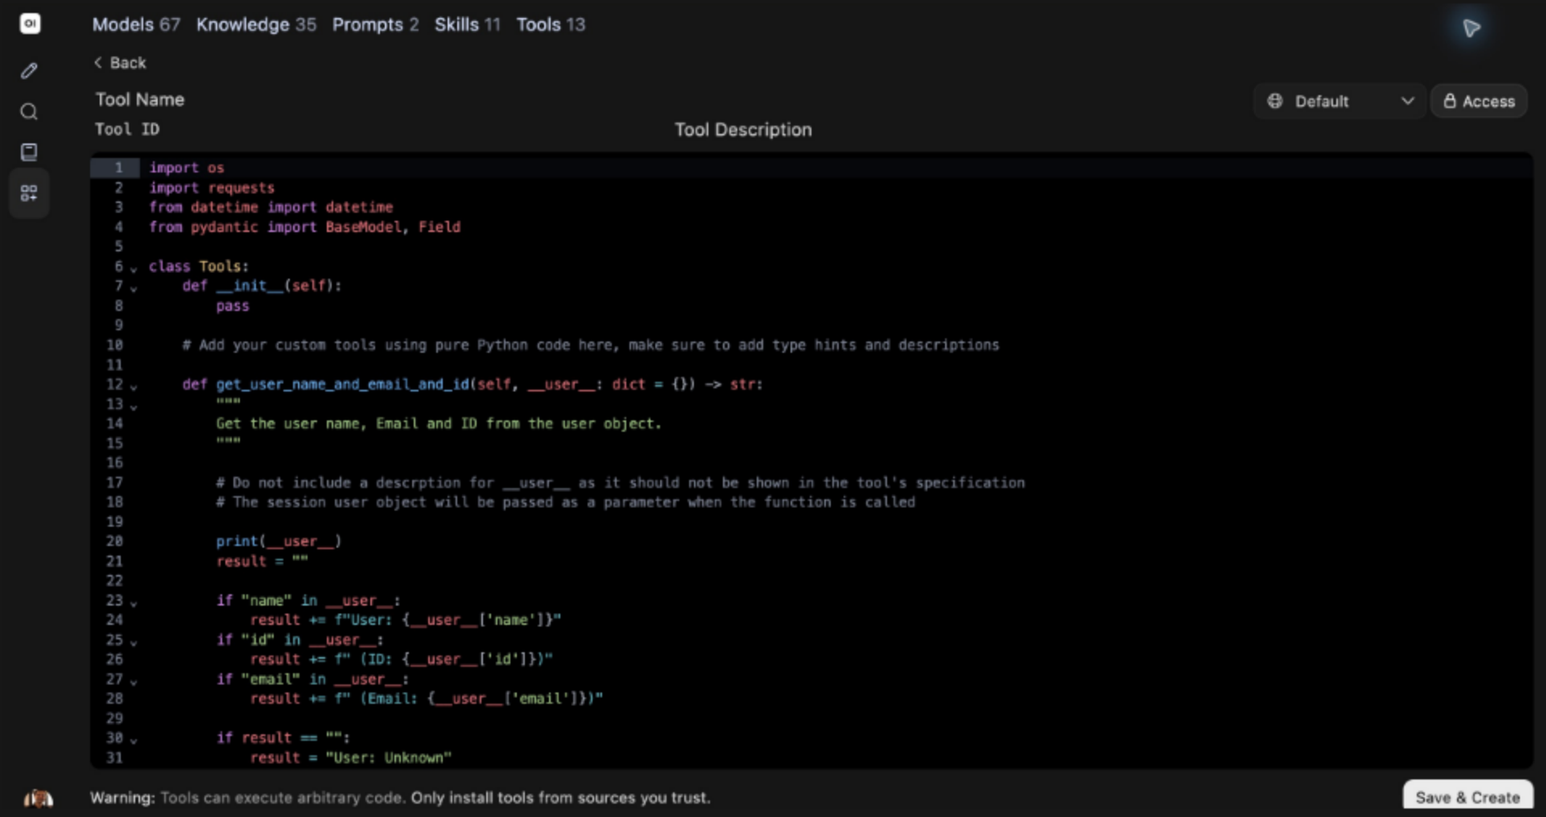

Create Your Tool

Open **Workspace → Tools → Create**

Enter new Name and ID; replace sample code completely

Review **Access**, then **Save & Create**

For a skill, use Skills → Create · Select new copy and repeat original test

Series Reflections

What task in your teaching or research could benefit from a skill or tool?

Across the series, how has your approach to custom models changed?

What would you develop next with the prompts, knowledge collections, skills, and tools you have explored?
