Choose Your Own Adventure

Continue your saved model or clone it first

Open **Workspace → Models → Edit**
Review your system prompt to identify setting, goals, and rules from last time

Keep this model card open while you add a skill and a tool

Select **Workspace** in left sidebar, then **Models**. Search for **STEM Adventure Games**. Open ••• beside it and select **Clone**.

What Is a Skill?

Skills contain plain-text instructions for repeatable tasks

Trigger	Request or condition that starts a procedure
Procedure	Steps, checks, and points that require a question
Output	Required response content and form

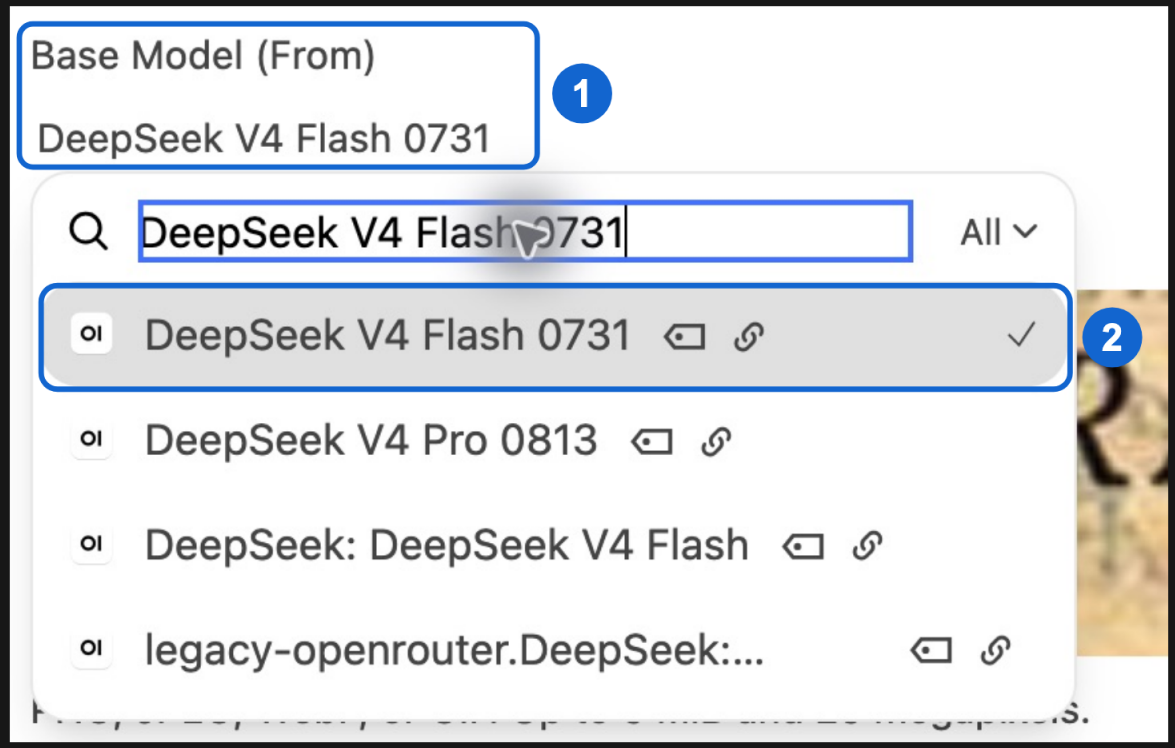

What Is a Tool?

When a model calls a **tool**, it is given the ability to execute a function and return its result, usually through a Python script

This is called **tool calling** (aka **function calling**)

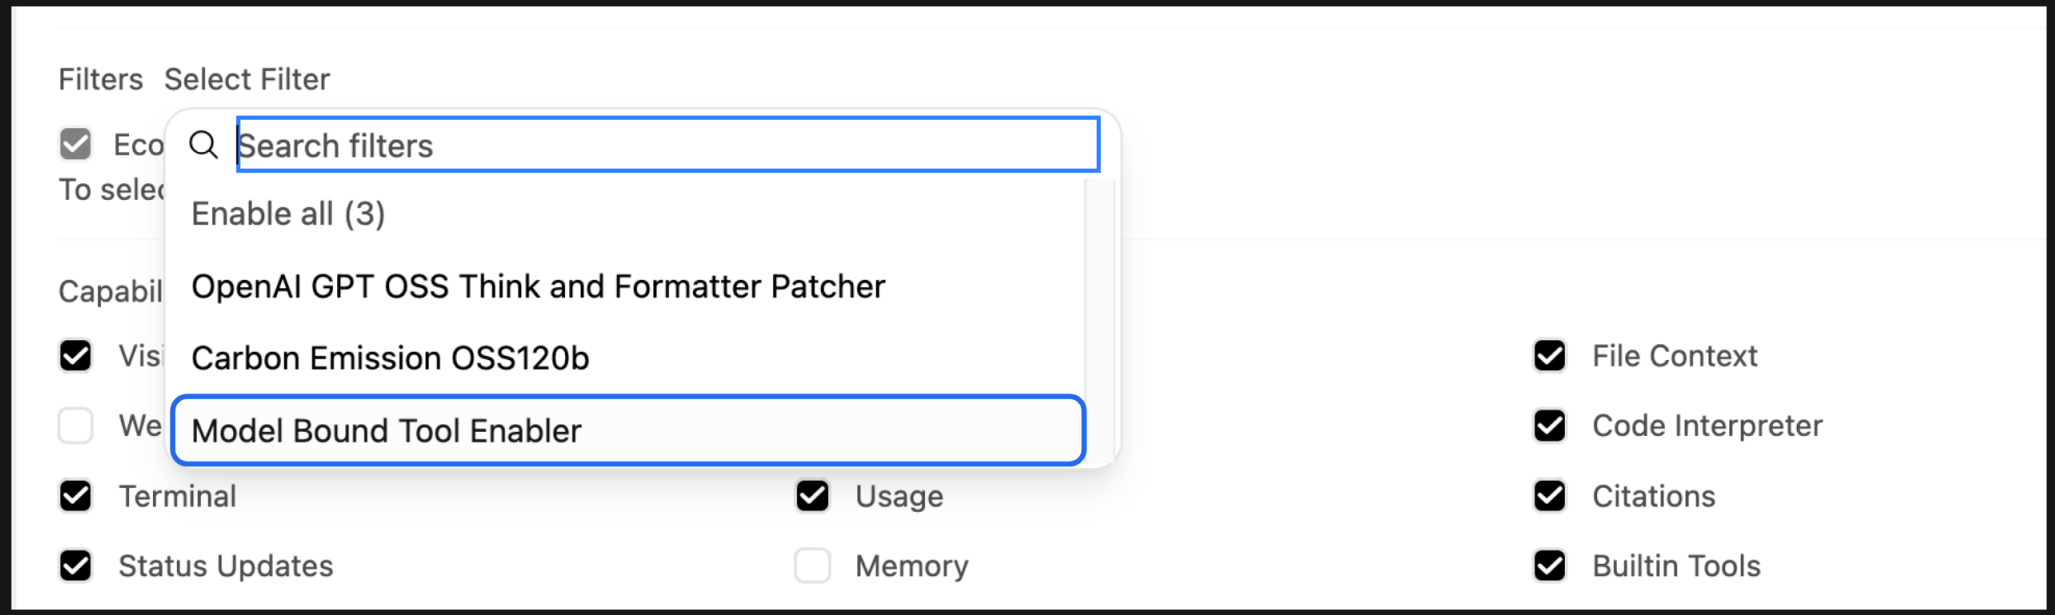

Input	Information passed to a function
Execution	Code that applies specified rules
Result	Returned output for a model to inspect

Update Model for Tool Calling

Enable Filter

Enable **Model Bound Tool Enabler** on your model card, which binds assigned tools to the model's operations.

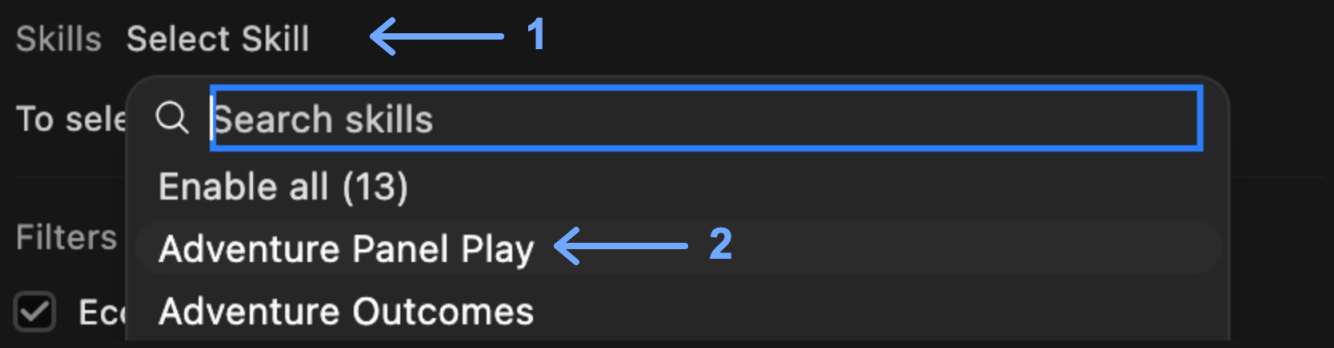

Add Your Skill

In **Workspace → Models → Edit**, find **Skills → Select Skill**

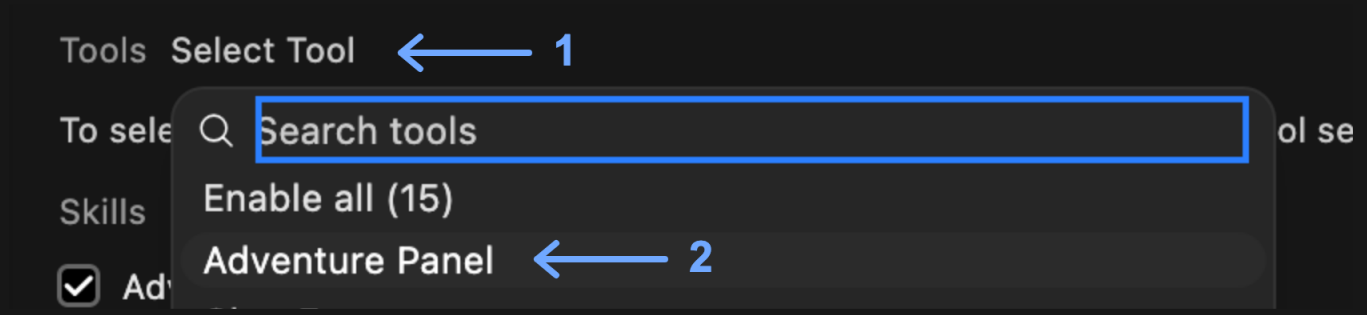

Choose **Adventure Panel Play** and read its saved instructions

Keep this model card open for the tool

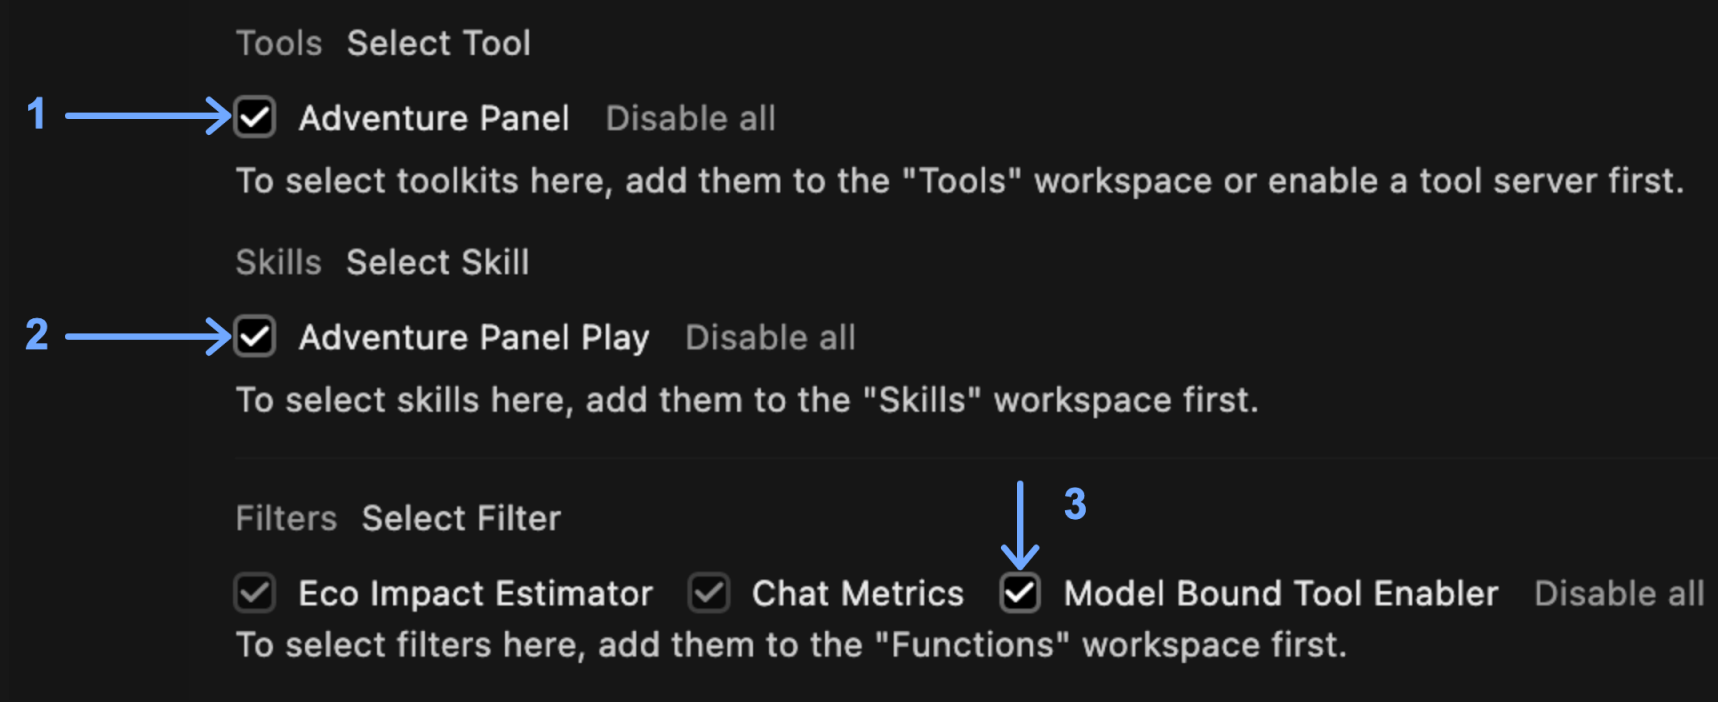

Add the ‘Adventure Panel’ tool

In this same model card, open **Tools → Select Tool**
Choose **Adventure Panel** · Keep **Adventure Panel Play** selected
Add the next prompt instruction, then click **Save & Update** before testing

Model Card Check-In

Confirm **1. Adventure Panel**, **2. Adventure Panel Play**,
and **3. Model Bound Tool Enabler** are selected
Keep your own knowledge collection attached above

Add Skill Instructions to the Bottom of Your System Prompt

Copy prompt

Load the attached Adventure Panel Play skill (extend-adventure-games) and follow it on every turn. Use show_scene from the Adventure Panel tool to display each scene and its choices. Follow this system prompt's setting, goals, rules, and source instructions.

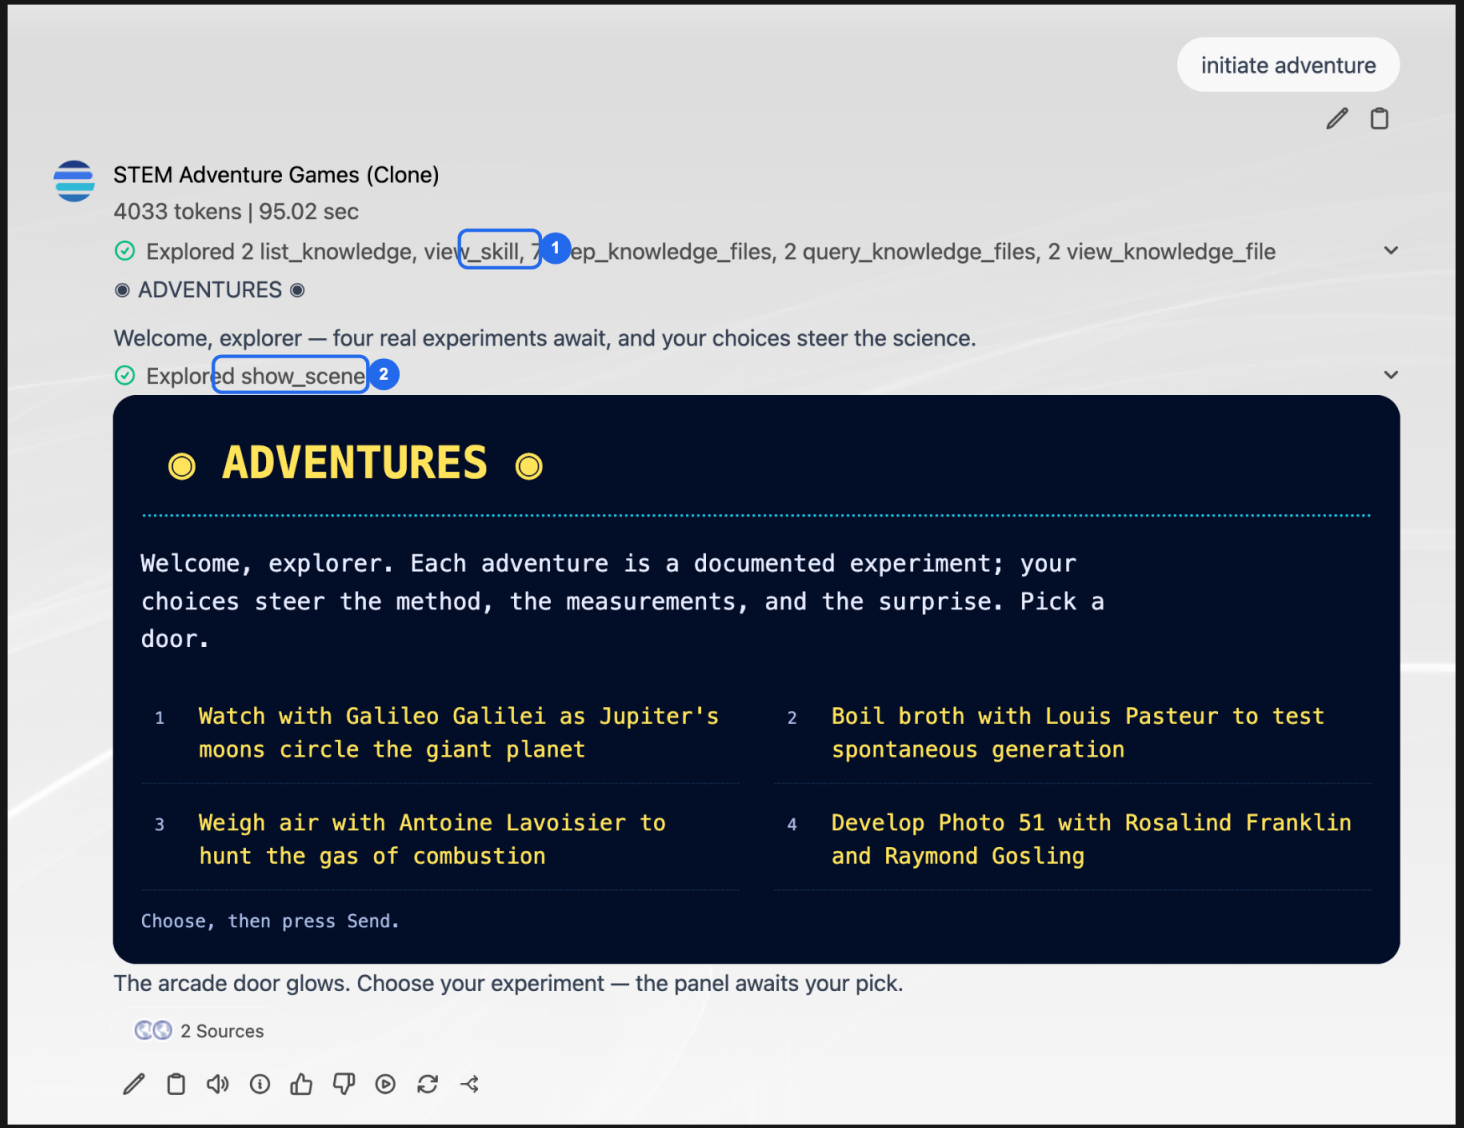

Test Your Adventure

1. Run your updated adventure game
2. Verify configured skill and tool are called appropriately
3. Then play the rest of your game

Observe Game Results

1. Check skill call
2. Check tool call

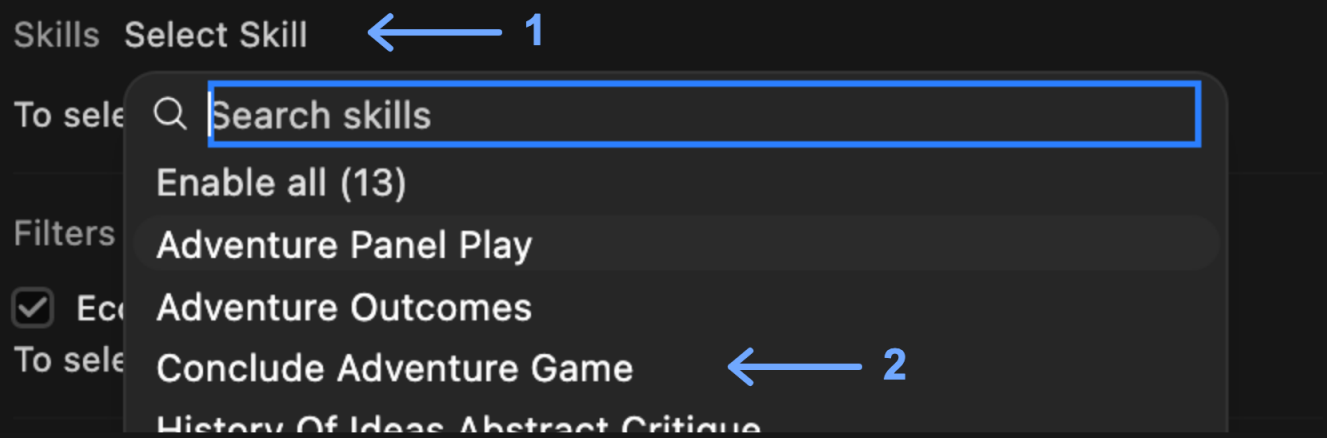

Open details to confirm selected skill

Explore Other Skills

After your first adventure works, try **Adventure Outcomes** or **Conclude Adventure Game**

Read saved instructions · Change one item · Save your model card and compare results

Choose Your Task

Revise One Item

Copy complete tool code or skill instructions

Describe an observed problem and one change

Copy tool code · Skill instructions

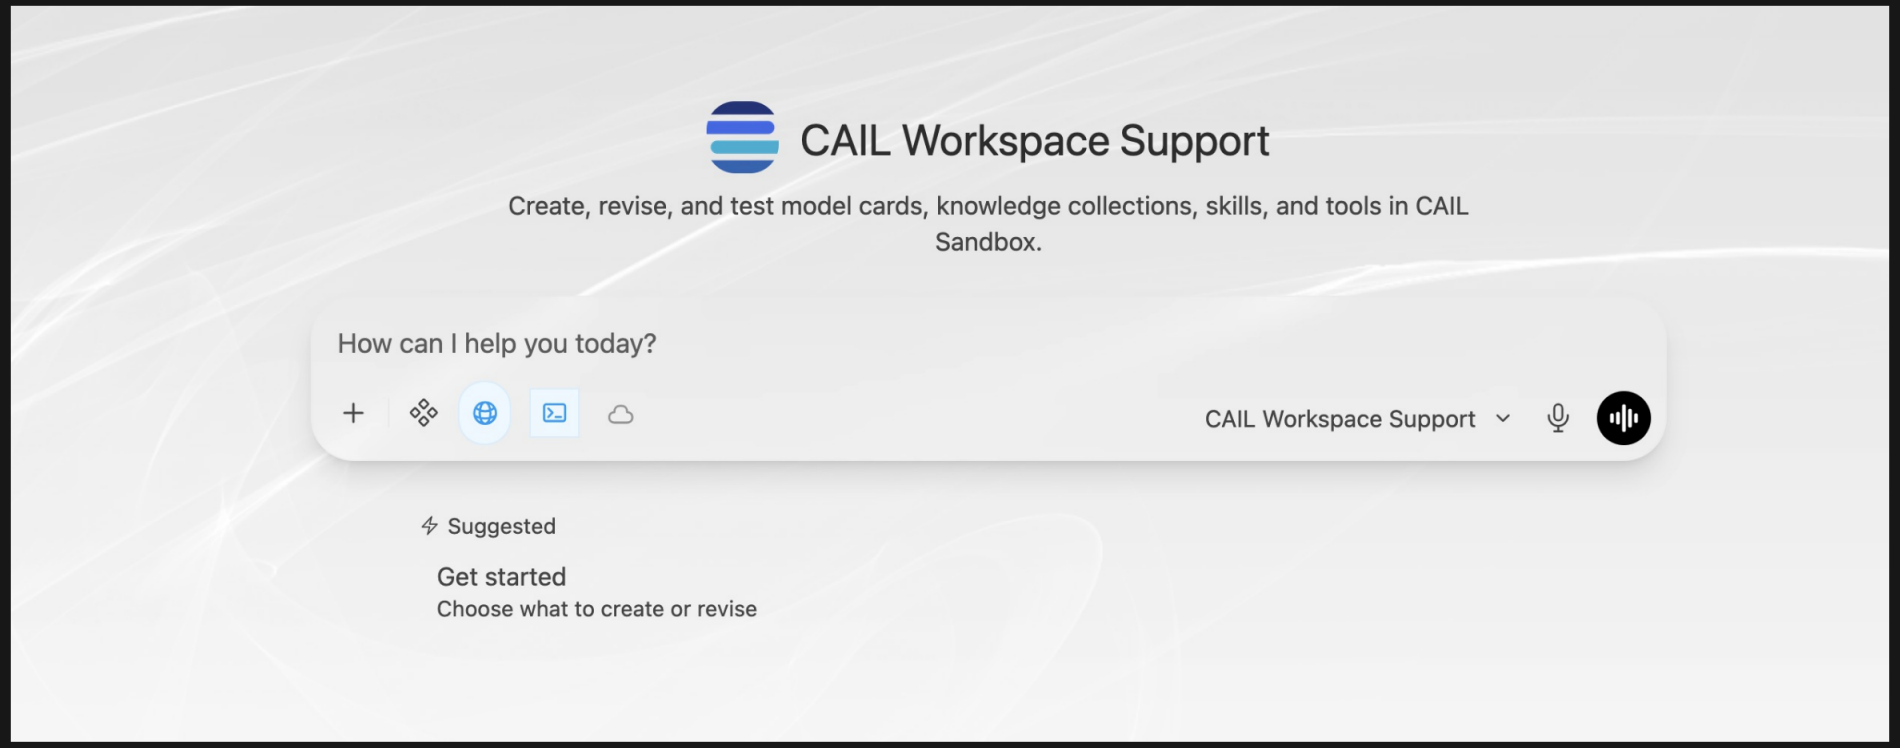

Create Your Own

Choose your own tool or skill

Specify purpose, required input, and expected result

Work With Support

Prompt CAIL Workspace Support to generate a skill and/or tool that continues to support or further extends your adventure game, adapting an existing skill/tool or making your own.

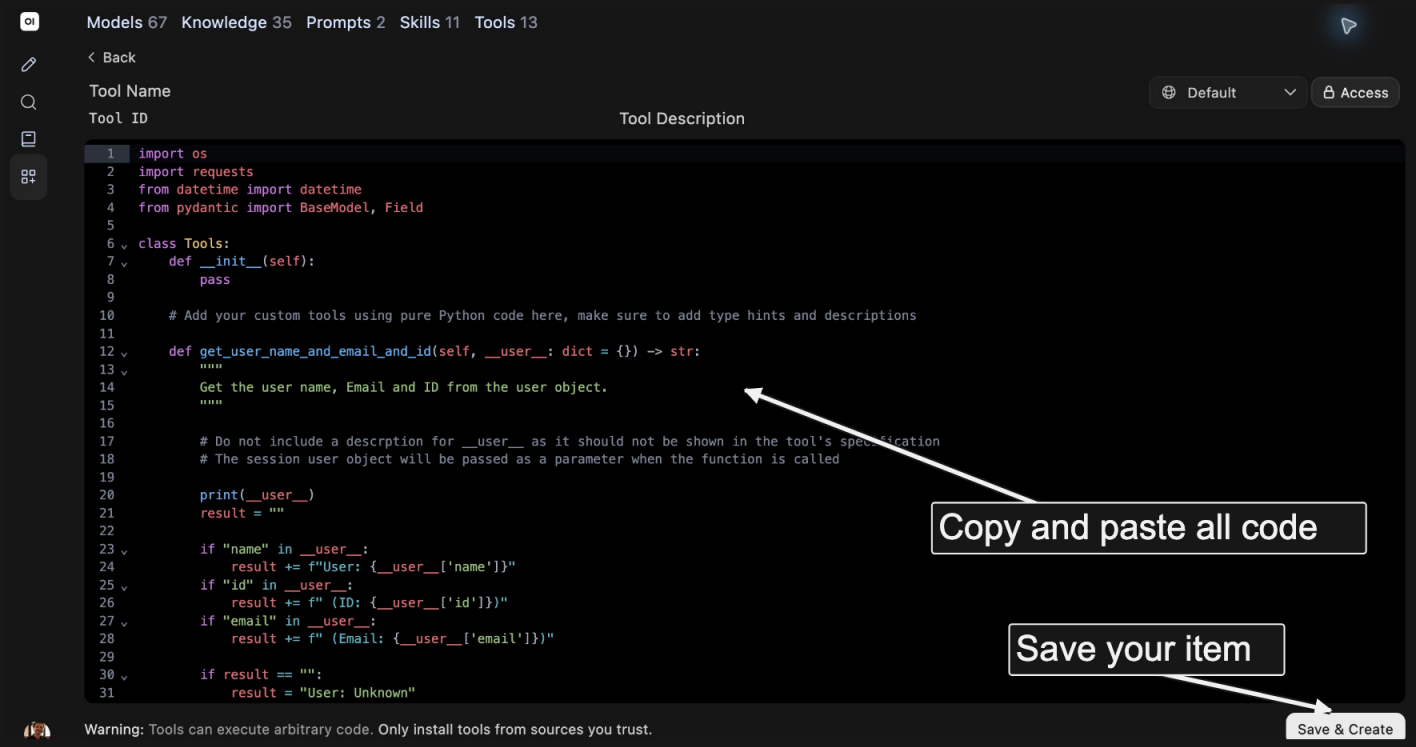

Adapt Your Adventure

Introduce a lesson plan, learning outcome, or disciplinary focus to your use of **CAIL Workspace Support** card

Prompted to generate a skill and/or tool that continues to support or further extends your adventure game, either adapting an existing skill or tool, or making your own.

Add Tools or Skills

Copy and paste all code for tools or plain text for skills, then save your item. On your model card, select your new tool or skill, and signpost it in your system prompt.

Series Reflections

What task in your teaching or research could benefit from a skill or tool?

Would you be interested in joining our coworking session on October 29, 2–4pm, to build your adventure into a collection so that we can showcase our work over the course of the series?

What would you develop next with the prompts, knowledge collections, skills, and tools you have explored?
